Keep Your Family’s Do-it-Yourselfer Safe This Summer

Break out the power tools, Dad. Summer is here. But while the weather may be right for home improvement projects, your electrical system might not be ready for safe power tool use.

Ground-fault circuit interrupters (GFCIs) are fast-acting circuit breakers that cut off power in less than one-fortieth of a second—quick enough time to save you from getting shocked in case of a ground fault. Your home may already have these in its outlets, but if not, GFCIs can be installed inexpensively.

Portable types also can be connected either to the outlet or the cord of the tool itself.

Here are some other safety tips from the Occupational Safety and Health Administration for an accident-free do-it-yourselfer:

- Never carry a tool by the cord or yank the cord to unplug it.
- Keep cords away from heat, flammable substances and cutting edges.
- Use gloves and safety footwear and eyewear for every project.
- To avoid accidental starting, don’t hold your finger on the switch when carrying a tool.
- Wait a few days after it rains to do outside work. Don’t use tools in wet or damp locations.
- Keep work areas well lit.
- Remove cords from areas where they could cause a tripping hazard.
- Tag any damaged electric tools or wires and remove them from the work area.
- Use double-insulated tools designed to prevent electric shock. ■
