Frozen Water Pipes

Frozen water pipes are inconvenient and costly to repair. Klickitat PUD Water/Wastewater department recommends the following tips to prevent or thaw frozen pipes at your home or business:

- Let the water run at a slow, constant drip during extreme cold temperatures. This is less expensive than a repair bill.
- Insulate all water pipes from cold moving air and keep them dry.
- To thaw a frozen pipe, heat the area around the frozen part with an electric space heater, a handheld hair dryer or a heat lamp. If this is a problem, call a plumber. ■
