

Klickitat PUD (District) The District will design and install all required primary power related electrical installations and may install the secondary service lines. The District will own and maintain any primary and secondary electrical installation up to the point of service. The point of service is the meter base on underground services, the drip loop on overhead masts or the current transformer if applicable.

The District shall make the connections to these points of service.

The District will acquire any County road, State Highway, or Railroad crossing permits. Please note that if a BPA power line crossing is required it takes a minimum of 3 months to process the applications. Any of these permits may incur a fee, the cost of which will be borne by the customer.
