Power Supply Fast Facts

Klickitat PUD provides safe, reliable and affordable energy to our customers. To do so, we purchase power from many sources around the region, and produce some ourselves.

- Roughly 80% of Klickitat PUD’s 2022 power supply was from carbon-free resources, including hydro, wind and nuclear power.
- The remaining 20% of our power was largely obtained through market purchases from Washington-based generation resources, which include low-carbon resources.
- Of our overall power supply, 77% was supplied by Bonneville Power Administration, 7% was supplied by KPUD’s share of output from specific hydro projects. The remainder came through other purchases.
- Beginning October 1, 2023, KPUD will buy roughly 92% of KPUD’s power supply needs from BPA, with the remainder provided by our share of specific hydro projects.
- KPUD is well-positioned to meet the requirements established in the Clean Energy Transformation Act passed in 2019. The act requires that KPUD uses a carbon-neutral power supply between 2033 and 2044 while achieving a carbon-free power supply starting in 2045. Planning is underway to ensure we are able to continue offering safe, reliable and cost-effective utility services to our local communities, given the requirements of CETA.
